

CONTROL OF FEED ENTERING THE FARM

1	Creep feeds should be delivered in bags on pallets, to an agreed place off site, for moving into the store by unit staff
2	All feed should be put into a store which is water and vermin proof
3	Delivery notes are required for each batch of feed, to be retained at the unit office
4	Traceability - Samples of feed will be retained for a period of 3 months at the mill, Samples should be delivered with feed and retained for 2 months
5	Feed spilt anywhere on the farm must be immediately swept up
6	Feed hoppers should be examined regularly to ensure that they are sound
7	All feed hoppers in straw yards should be protected from birds
8	All hoppers should be cleaned out regularly and totally emptied between batches of pigs
9	Rats and mice must be controlled
10	All feed bins should be accessible from the outside and must be emptied completely, cleaned and inspected regularly. Fungal treatment should be carried out as required
11	Feed bins containing medicated feed must be clearly marked as such with date filled and the drug withdrawal time
12	Each batch of feed should be physically examined for quality and consistency
